

# Secure KVM Switch, DVI to DVI/VGA - 4-Port, NIAP EAL2+ Certified, Audio, CAC Support, Single Monitor

MODEL NUMBER: B002-DUA4

Safely switch between up to 4 computers with different levels of security. This NIAP-certified KVM Switch offers superior security and data protection for government / military agencies that require absolutely secure networks - read Government Computer

### Description

The Tripp Lite B002-DUA4 4 Port DVI / USB Secure KVM Switch with Audio offers secure and reliable access for any government/military desktop environment where security is required, by providing safe switching between computers operating on different networks. NIAP-certified to comply with Common Criteria EAL2+ security requirements

Hardware security includes: tamper-evident tape, chassis intrusion detection, and tamper-proof hardware, while software security includes restricted USB connectivity — non HIDs (Human Interface Devices) are ignored when switching — an isolated channel per port that makes it impossible for data to be transferred between secure and unsecured computers, and automatic clearing of the keyboard buffer. CAC (Common Access Card ) support\*

By combining physical security with controlled USB connectivity, the B002-DUA4 gives you the means to consolidate multiple workstations of various security classification levels with one keyboard, monitor and mouse (KVM) console.

\* CAC support not validated by NIAP

### **Features**

- National Information Assurance Partnership (NIAP) certified to comply with Common Criteria EAL2+ security requirements
- Compliant with the Federal Trade Agreements Act (TAA) for GSA Schedule purchases.
- Safely switch between computers with varying security levels.
- Isolated Channels Each port is its own channel, making it impossible for data to be transferred between connected computers.
- Tamper-Warning Labels Tamper-Warning labels will be placed on each side of the KVM, providing visual evidence if the unit has been tampered with or compromised.
- Housing Intrusion Protection Technology Housing Intrusion Protection technology disables the KVM if the housing is opened, causing it to become inoperable. When disabled, the front panel LEDs will flash repeatedly.
- Tamper-Proof Components All internal circuitry is soldered directly to the board, preventing the
